

# Home Energy

- According to the government, the residential sector accounts for about 21% of all the UK's green house gas emissions (mainly gas for heating).
- Unfortunately, home insulation and switching to low carbon forms of heating require considerable investment and there are few government schemes to encourage this.
- **ACTION:** The simplest action is to run your home at a slightly lower temperature.
- **ACTION:** Look at switching to a green energy tariff for your electricity and gas.
- **ACTION:** For those wishing to invest in energy reduction at home – house insulation is the first thing to consider.
